DIGITRIM 64

The Fotoba Digitrim 64 cuts rolls and sheets with ease and accuracy. It cuts rolls or sheets into strips (X-cut), then the strips are fed again for the Y-cut. The cutting blades to the edge of the image automatically for easy feeding.

On average, an operator can cut 500 to 700 images per hour.

When cutting, the Digitrim is guided by the FOTOBA CUTMARKS which are placed along with edge of the images by the digital printer.

All popular RIP's have the capability to create FOTOBA CUTMARKS automatically.

Regardless of any slight misalignment, when paper is introduced into the Digitrim, the cutter will automatically re-align itself to the image

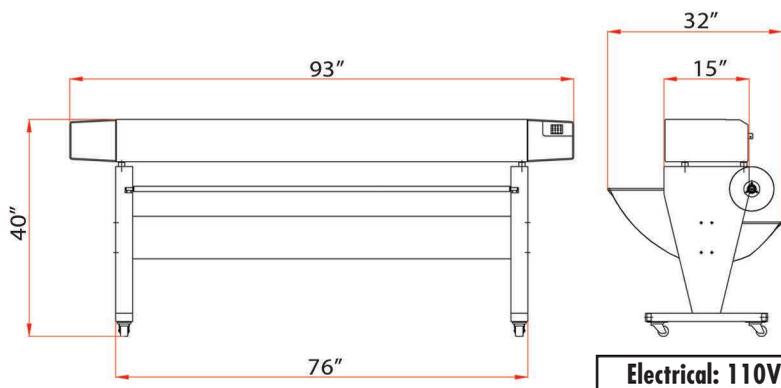

The Digitrim 64 can handle numerous types of media with a maximum thickness of 0.5mm (20 mil) including Polycarbonate, Laminates, Encapsulated Media, Photo Paper, Vinyl, Self-Adhesive Vinyl, PVC, Inkjet, Electrostatic Plotter Media, Graphic Arts Film, Canvas and Duratrans.
